Business Intelligence Concepts

What is Business Intelligence?

“Business Intelligence” refers to Processes, Technologies, Applications, Skills and Practices to deliver accurate and timely information to appropriate decision makers within an organization to support better decision-making.

The term ‘Business Intelligence’ (BI) gained popularity in the late 1990’s but the concept (previously referred to as ‘Decision Support Systems’) has existed long before this formal definition.

BI Maturity Model

BI Battle

Business

- Long, slow and expensive
- Hard time prioritizing
- Data quality is not acceptable
- Cannot define all requirements upfront
- Need all the data
- Need freedom to change rapidly
- Cannot wait in IT queue

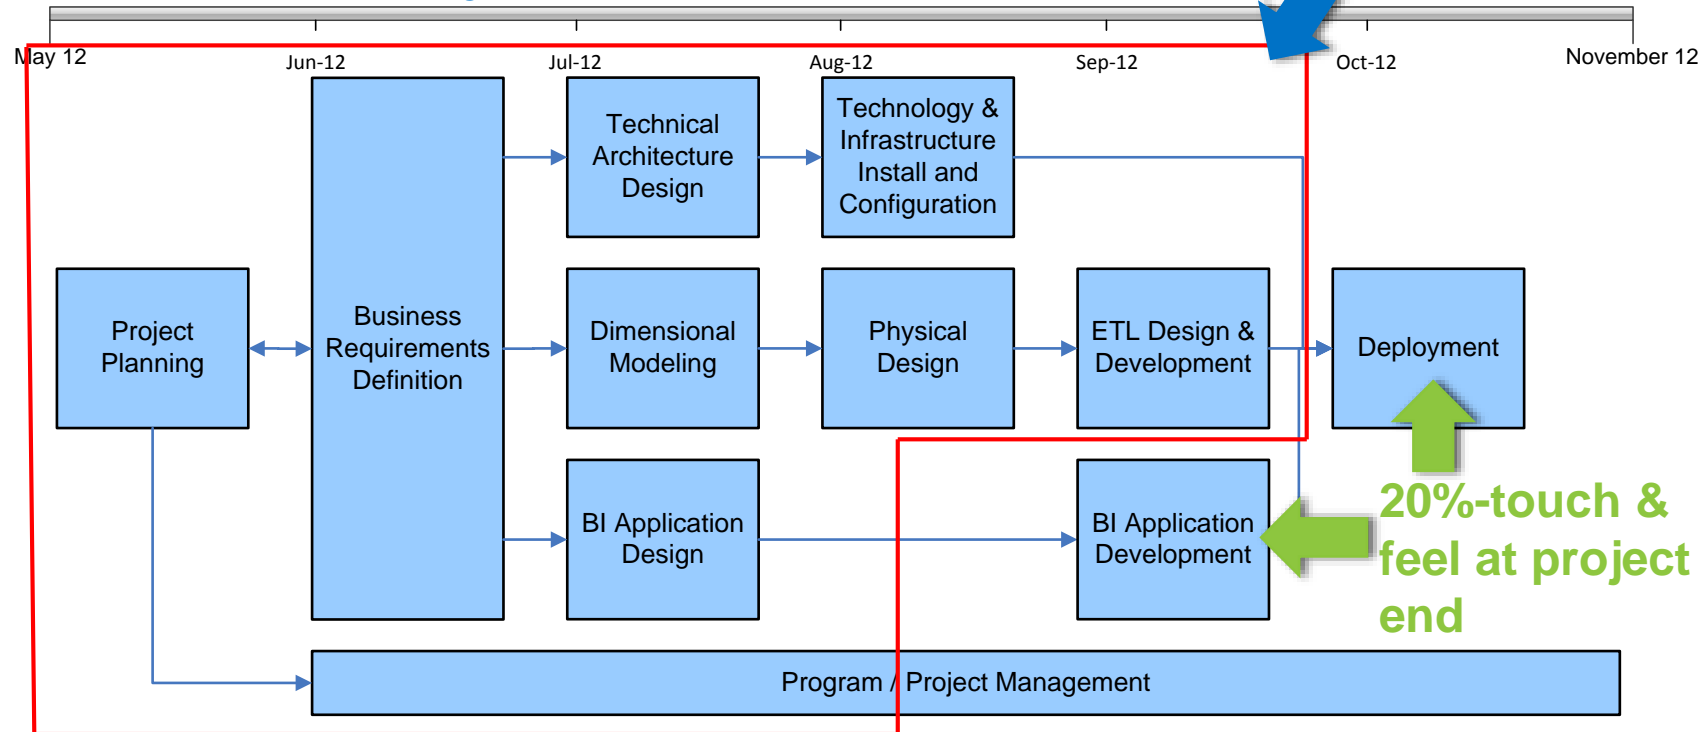

IT

- Have limited capacity
- How many formats can we produce
- Cannot own data quality
- Scope Creep all the time!
- Need more time & money
- Hard time to determine feasibility
- Constant change is hard

Traditional BI Methodology

✓ Ent Data Integration & Architecture
X Time

80%-backend work
takes too long

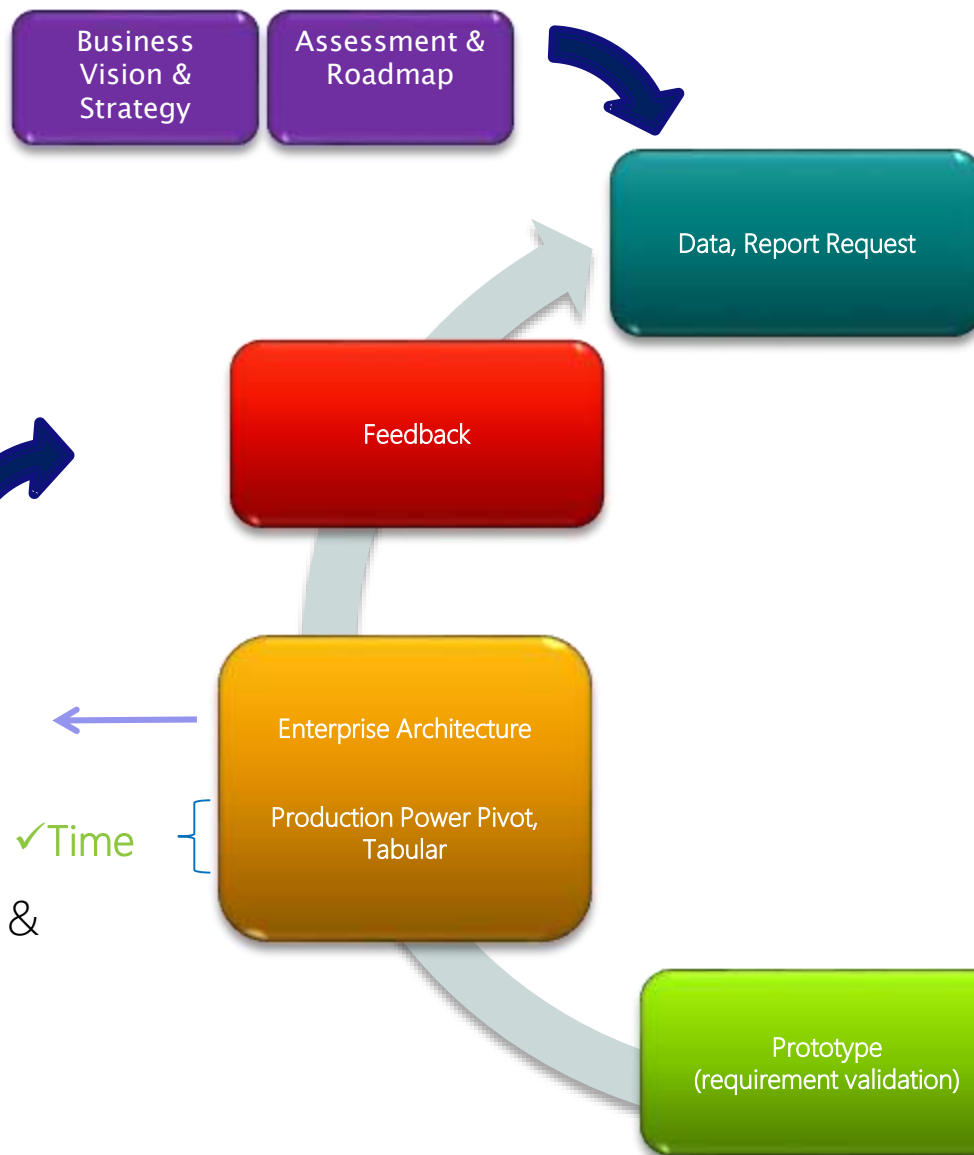

Agile BI Strategy

✓ Enterprise Data Architecture

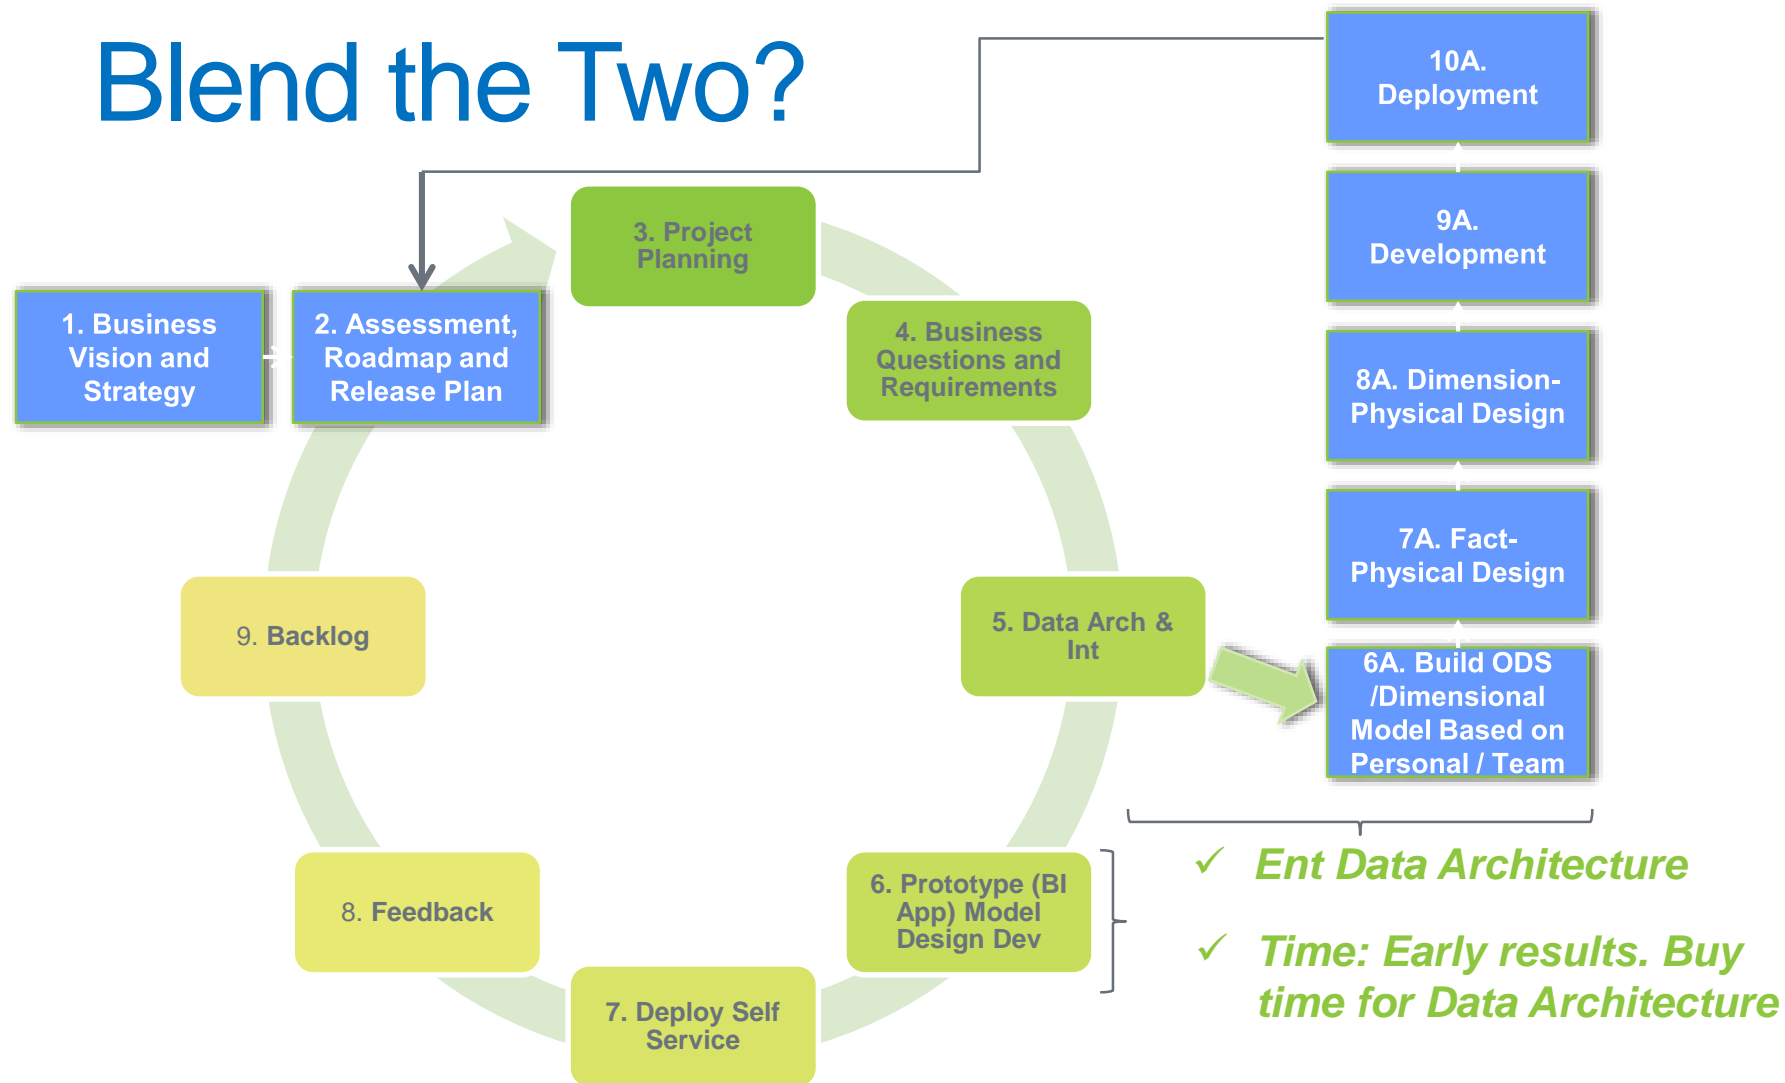

ODS, EDW, Cube
Design
Develop
Test
Deploy

✓ Time

1. Iterative delivery of reports and dashboards
2. Weeks instead of months using Microsoft BI &
3. Explore data and understand
4. Evaluate needs by sharing and learning
5. Evolve to build robust architecture for the enterprise
6. Repeat process

Blend the Two?

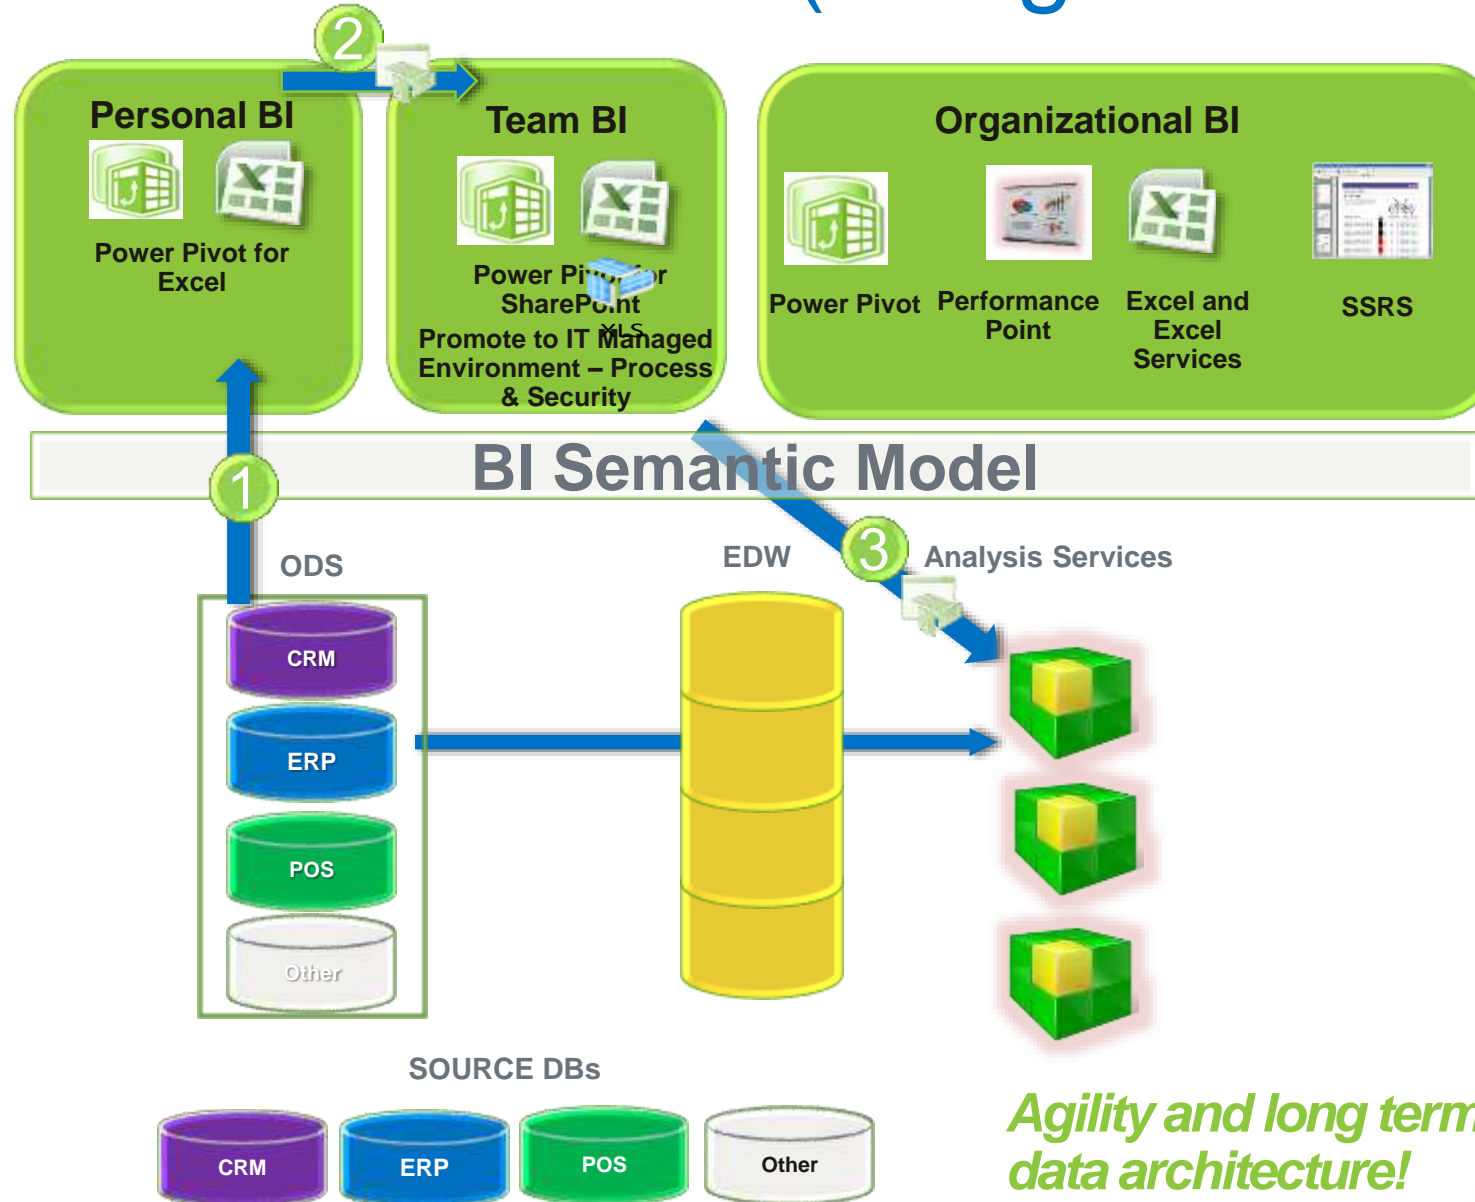

- End Goal is a comprehensive BI solution (ETL, EDW and Presentation)
- Agile BI Solutions in the interim while Data Architecture is built
- Ent. Data Architecture: ODS, EDW based on Exploration, Evaluation and Evolution.
- Accelerate robust EDW build based on solid requirements and feedback

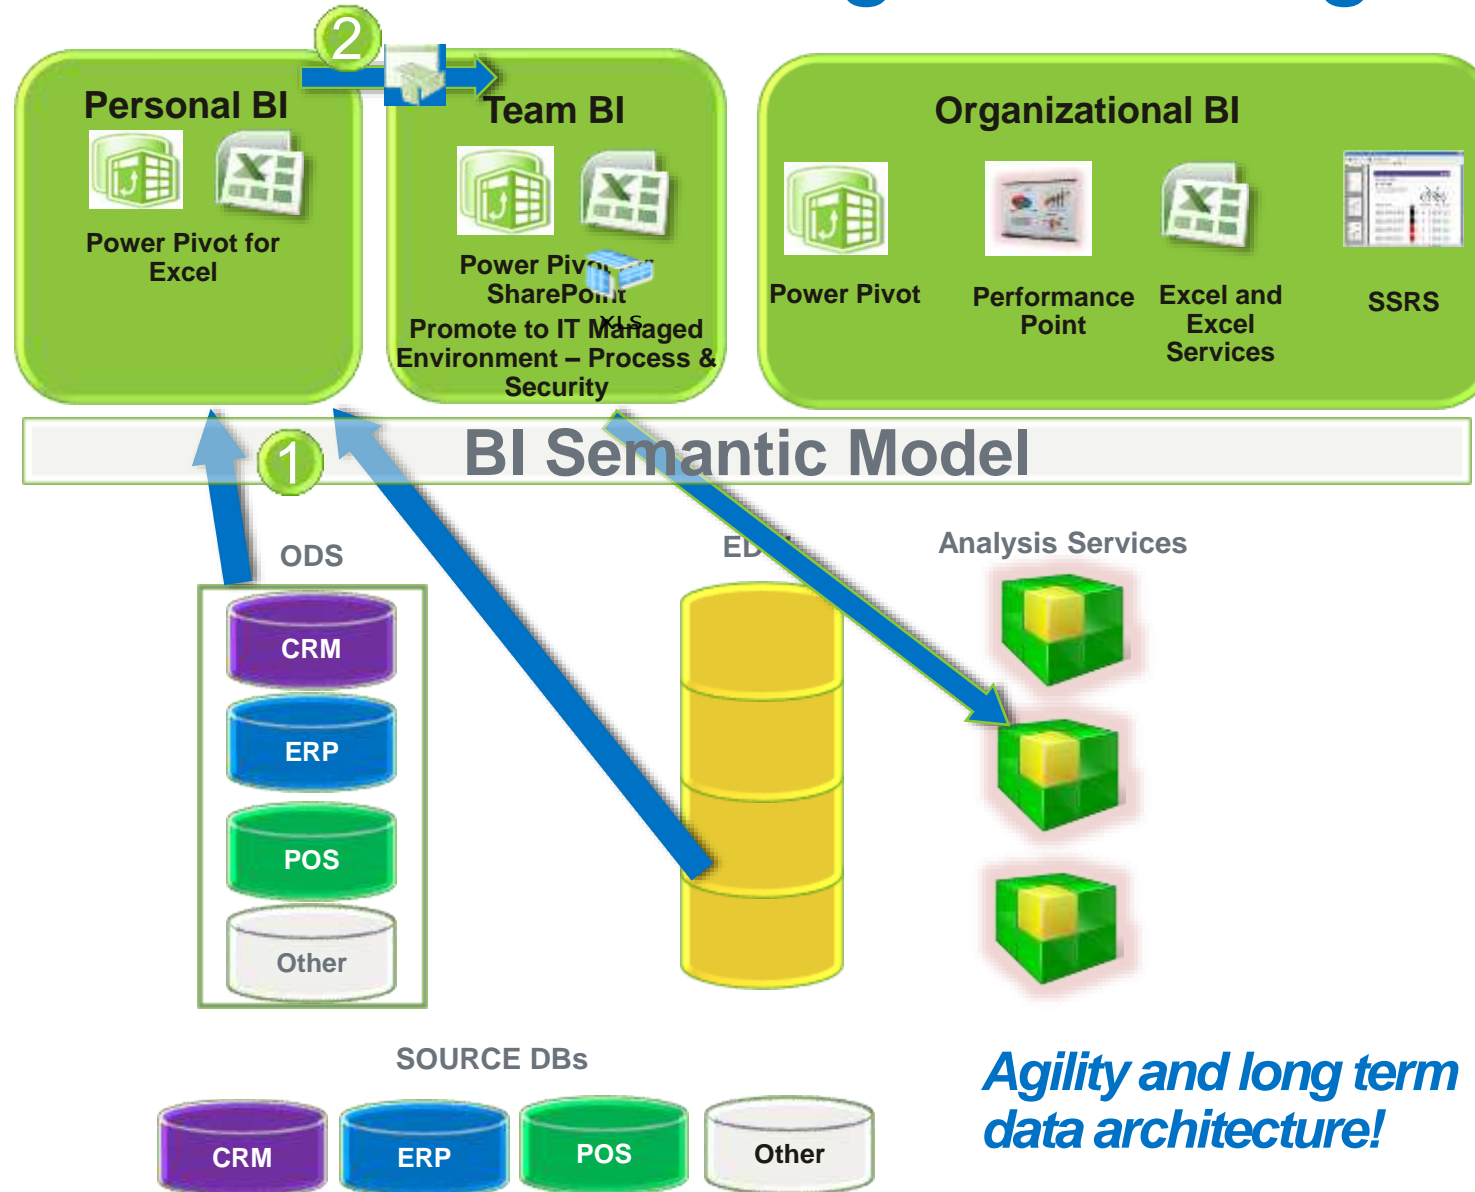

Personal > Team > Enterprise

Scenario 1: First DW (end goal is EDW)

Scenario 2: Enhancing to existing DW

Benefits

Blended approach addresses both Data Architecture and the Need for Speed.

1. Prototyping addresses the Time challenge

- Visualizing, touching, feeling the data – facilitates discovery and exploration
- Enables data profiling, validate requirements
- Keeps customers engaged and involved in the process
- Focus is on business discussion vs. technical specifications
- Facilitates ownership and adoption

2. Classic approach to build robust Data Architecture based on EEE.

- Accelerates Data Architecture (EDW) build in parallel based on solid requirement
- Perception of speed, they see activity, no big gaps in time, “pressure relief valve”
- Removes the unknown which results in uncertainty and a sense of risk
- Reduces cost of Data Architecture build

Business can see the value in action

Microsoft BI Toolset (PowerPivot, PowerBI)

A powerful new way to work with data

Self-service business intelligence with familiar Excel and the power of the cloud

Analyze in Excel
1 Billion Office Users

Collaborate in Power BI for Office 365
1 in 4 enterprise customers on Office 365
